DETAILED ACTION

This application has been examined. The claims 1-9 are allowed.

Reasons For Allowance

1. The following is an examiner's statement of reasons for allowance: The present invention is directed to a foldable keyboard including a first keyboard unit, a second keyboard unit, and a rotational connecting part provided between the first and second keyboard units, so that the first and second keyboard units are rotated about the connecting part to come apart from each other into an unfolded, horizontally arranged state for use of the keyboard, while the first and second keyboard units are rotated about the connecting part to come close to each other into a closed, folded state for nonuse of the keyboard. The combination of the closest prior art of Batio (US 6,081,207), Lin (US 2003/0007822) and Olodort et al. (US 2004/0067086) showed a similar invention. However, they fail to teach a second support member having a first end and a second end, the first end being pivotally connected to a back wall of the second keyboard unit; wherein the second ends of the first and second support members are pivotally connected with each other, and the first and second support members are set up in a standing orientation in synchronization with the rotation of the first and second keyboard units in a direction which they come apart from each other as claim 1; or a second support link which connects the second connector storage part to the connector unit; wherein the connector unit is moved toward the rotational connecting part from the first and second connector storage parts in synchronization with rotational connecting part in a substantial center of the keyboard when the first and second keyboard units are rotated into the horizontally arranged state as claim 6.
